# KIWI

**OS-free 'computer'  
designed for SDI**

Designed by video specialists, **KIWI** combines the ruggedness and stability of hardware electronics with the versatility of software.

**KIWI** brings the power of programmable chips to real time video production.

**Color correction and legalizer, VBI databridge and data generators, logo inserter, luminance keyer, video delay** are the applications that make **KIWI** a universal tool for all broadcast customers.

***second to none***

**KIWI** has everything to make it future proof. Just try to find so much in competition:

- Dual SDI Inputs
- Analogue input
- SDI and composite Outputs
- Power fail relay bypass (SDI to SDI)
- Ethernet connection
- GPI I/O
- Field upgradable firmware from Compact Flash

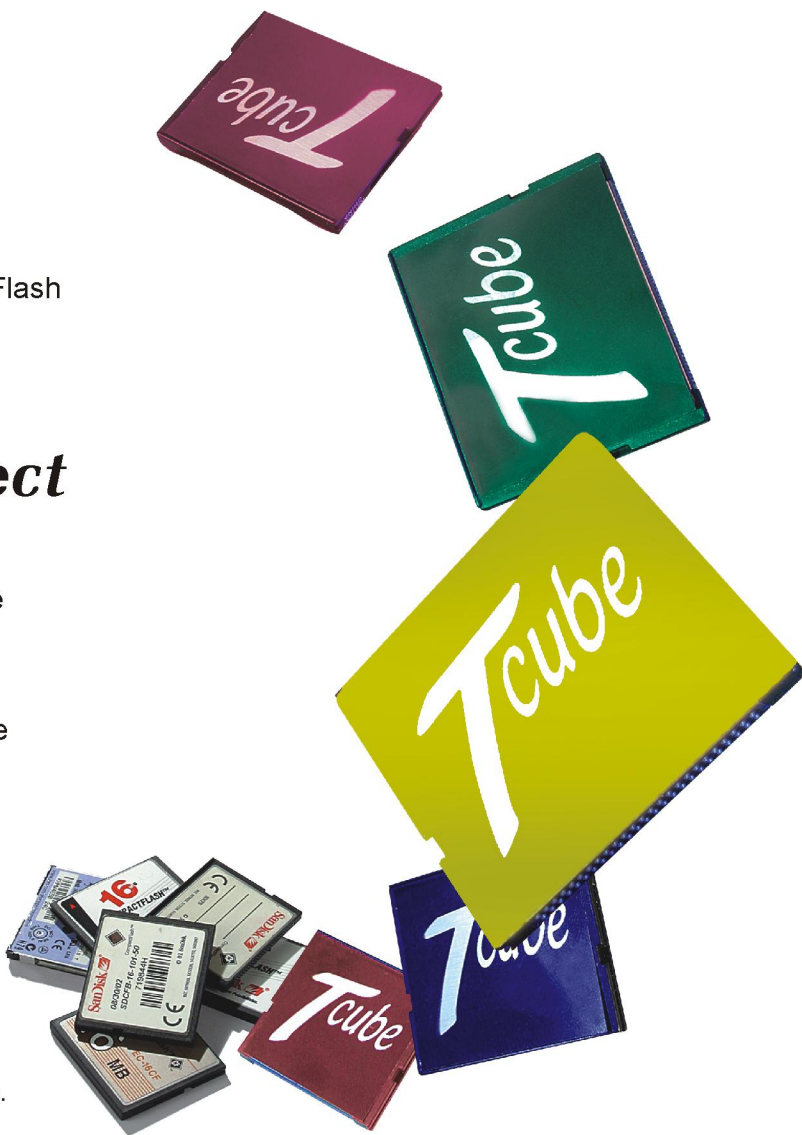

***Slice the KIWI:  
save money and protect  
your investment***

With **KIWI**, definitely forget about having hardware that turns obsolete in a couple of years or even less.

When you buy a **KIWI**, you simply choose from the different applications you need at the time of buying. That's all and it works !

Later, to suit your need you will simply buy new applications (the **KIWI** slices) at reduced costs (you pay only for the software).

By definitely saving a lot of money and keeping your hardware alive for a much longer period, **KIWI** will help make your business more profitable.
